

Presentation-III — User Interface

- Working desktop UI connected to MySQL using Python and mysql-connector-python.
- Supports insertion, deletion and viewing of Vehicle records.
- Live operations can be demonstrated by performing the action in the UI and refreshing the database view.

Insert Operation

- Enter plate number, vehicle type, owner name and phone.
- Press Add Vehicle to execute an INSERT operation.
- The table refreshes and the new record is visible.

Delete Operation

- Enter/select a vehicle ID.
- Press Delete Selected to execute a DELETE operation.
- The table refreshes and the deleted record disappears.

View Operation

- The View/Refresh button executes `SELECT * FROM Vehicle`.
- Records are displayed in the application table.
- This provides a direct visual demonstration of database contents.

Implementation

- Python Tkinter provides the user interface.
- MySQL Connector/Python provides database connectivity.
- Database credentials are configured in the connection section of app.py.
